The scales of the eel tell its age On each may be observed at intervals several more or less clearly marked lines parallel to the margin These mark lines of growth, one for each year of the life of the fish. Three years, however, must be allowed to: the innermost ring as the eel has no scales until the third year. The scales do not overlay to any extent and are arranged in series of small groups at right angles to each other. so as to resemble what is known as herring-hone brickwork. Conger eels. wever, are said to have no scales.

Plymouth Rocks, all things considered, are perhaps the most popular va-riety bred in this country at the pres-ent time. The barred, which is most raised, is commonly given as a cross between the Black Java and the American Dominique. Besides the Java other Asiatic blood has probably been

nouth Rock is more like the Asiatic

than the European chicken The greatest recommendation for the Plymouth Rock is the excellent growth made by the young chickens. In this quality they have no superior. The Plymouth Rock pullets are good layers, but as yearling hens are prone to turn the feed into fat rather than

One objection to the barred variety is the difficulty in keeping the breed true to the standard type. The pure breds are required to have even and distinct bars of the same shade in male and female. These are difficult points to maintain and resort is often made to double matings or the keep

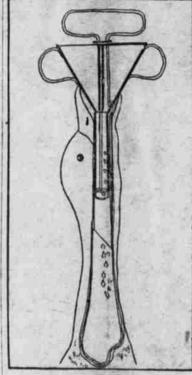

duce cockerels and the other pullets. White and buff Plymouth Rocks are later products than the barred variety Much of what has been said will apply to these also. The white variety is free from the color objection of the barred type, but the objection to the fattening tendency applies to hens of this variety perhaps more forcibly than to the barred. Buff Plymouth Rocks will average smaller than the other varieties of the breed. Although a solid color bird, they, like all buff breeds except the buff cochin, will be found difficult to breed of one color, owing to the tendency to possess black or white in the wings and tail.

FRENCH METHOD OF FEEDING

Kept in Cages.

In France the geese, which are intended to supply the main ingredient of the delicacy "pate de fois gras aux truffes" (goose-liver paste with truffles), are kept confined in narrow cages. The slightest movement is thus prevented, and food is forced down their throats, often with nothing more than a tube and stick, in or, der to produce an extraordinary development of the liver, says the Popular Mechanics.

The drawing illustrates a newly devised instrument for this mechanical treatment, which in a measure alleviates the inhumanity of the forced feeding, in that it does not injure the throat or prevent breathing. It consists of a funnel of galvanized iron,

provided with a piston which cannot protrude beyond the end of the tube. At the lower end of the galvanized tron tubing is a section of rubber

Washing Dirty Eggs. It's annoying, perhaps, just about supper time to have to stop to wash dirty eggs when the hens breaks one, but this is a task that must not be put off until tomorrow.

Few Birds in Indian Seas. The absence of sea-birds forms a singular trait in the character of the Indian seas; scarcely a single living thing appears in the sky above, or the sea below, betwixt Bombay and the Indus.

Go into a factory where they make mariners' compasses, and you may see the needles before they have been magnetized. They will then point in any direction, but from the moment they are applied to the magnet they point to the north, and are true to the pole ever afterward. In this they are like the young man before and after he has a purpose in life.

Famous Book Agents. Napoleon Bonaparte was once a book agent; Jay Gould was a canvasser; George Washington in his youth sold over 200 copies of a subscription book; General Grant for a time earned his living as a subscription agent; Webster and Bismarck

paid part of their college expenses

through a book agency.
